High light transmission acrylic lampshade

Preferred high permeable acrylic lampshade, uniform and soft light transmission is not dazzling.

Transparent Fan Design

Simple and transparent fan leaf decoration, silicone texture delicate and clear, winding elegant fashion and highlight personality

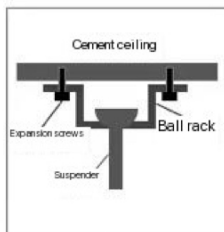

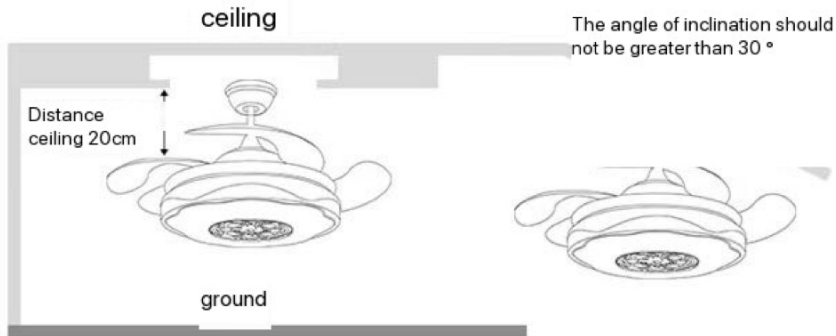

Ceiling Fan Light Installation Basic Requirements

Ceiling fan lamp installation requirements for the ceiling: floor height $\geq 2.6\text{M}$ ceiling load $\geq 30\text{KG}$

1. The ceiling of the ceiling fan lamp is suggested to be a flat ceiling. If there is a concave circular and square ceiling design, please use the ceiling surface to calculate the installation height. We recommend taking pictures and sending them to online customer service to avoid causing the ceiling fan to have no wind after installation.

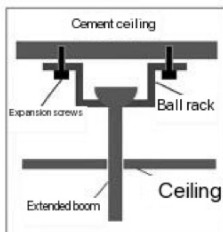

2. Ceiling fan light can generally be installed on the inclined plane, but the angle of inclination cannot be greater than 30° , otherwise you need to customize your own hook to adjust the installation angle.

As shown below:

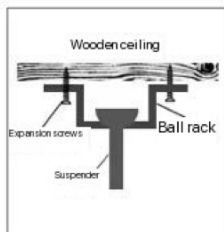

Standard installation

The picture shows the standard configuration (hanging installation) simple and convenient installation method, if you are the installation location of the new house loading and unloading do not do decorative ceiling, the default is the standard installation method

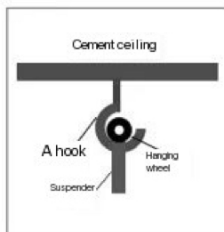

With ceiling installation

The illustration is a decorative ceiling ceiling, should be reinforced.
The ball rack is installed on the cement board in the front,
Boom and wire exposed decorative ceiling level
Line, lengthen the boom as appropriate, the length as
Depending on the height, you can consult
customer service.

Decorative ceiling (wood)

The illustration shows a ceiling with a framework ceiling and installation
Position must be reinforced with width and 80kg
The thickness of the fitting position template is not less than
20mm, remind the master in advance when decorating
Reinforce and thicken at this position

Hook installation

The hook installation is mainly aimed at the old house or the house with the old ceiling fan or prefabricated board structure, etc., the installation mode of the hook is installed, and it is noted at the time of purchase, because the hook installation is different from the standard installation access series.

Warm reminder: the fan blade distance from the ceiling should be more than 25CM, otherwise it will affect the wind.

Ceiling fan lamp products can not use stepless electronic speed control switch, will produce current sound! Remember!
